The Rational Method equation is: $Q = C \times I \times A$ where: Q = Storm Water Runoff (in cubic feet per second) C = Coefficient of Runoff I = Rainfall Intensity (in inches per hour) A = Area of Drainage Zone (in acres) The equation above can be modified to give you runoff in gallons per minute.

How To Calculate Drainage

Mucus is a substance normally produced by the body. It serves an important role, as it moistens, cleans and protects the lining of the nose and sinuses. But when this mucus is abnormally thick or produced in excess, its presence can be more noticeable — and annoying — as it drains down the back of the throat. This sinus drainage, or post-nasal drip, leads to coughing and irritation, and contributes to the misery of colds and seasonal allergies.

Sympatolysis is an additional effect of manual lymph drainage, as described by Hutzschenreuter (1994). It causes dilatation of the lymph collector, which increases the contraction of the lymphangion. Hence, both a large amount of lymph and manual lymph drainage result in an acceleration of lymph flow. Manual lymphdrainagedoessthrough ...

1 Anatomy and Physiology of the Circulation of the Blood

A runny nose is excess nasal drainage. It may be a thin clear fluid, thick mucus or something in between. The drainage may run out of your nose, down the back of your throat or both. The terms "rhinorrhea" and "rhinitis" are often used to refer to a runny nose.

Nasal drainage is an inconvenient and often embarrassing symptom that often accompanies upper respiratory infections and allergic rhinitis. However, this cumbersome mucous serves an important purpose. Mucous-producing tissue lines the nose, sinuses, throat, mouth, lungs, and gastrointestinal tract. Mucus works as a protective blanket over these surfaces and prevents the tissue under these areas from drying out.

Nasal Drainage: What is the significance of discolored ...

Position the patient in correct position of the drainage, see that he/she is as comfortable and relaxed as possible. Stand in front of patient whenever possible. Maintain the desired position for at least 5-10 minutes, if patient can tolerate it. Have the patient breathe deeply in a relaxed manner during the drainage.
